

Tour Master Pro (Poly)

Designed for Real Putting Performance

Residential putting green installs live or die on one thing: does the ball roll true? Tour Master is built around grain-neutral Poly construction, which means the blade orientation doesn't create a consistent directional bias the way standard turf does. On a putting surface, grain creates breaks where there shouldn't be any. Grain-neutral construction eliminates that variable and gives your clients a surface that plays consistently from any angle. This is the ideal choice for *putting green turf wholesale contractors*.

The Right Fit for Residential and Commercial Putting Greens

Tour Master positions as the accessible putting surface for residential accounts and commercial practice greens where performance matters but the install isn't a tournament venue. The Poly construction delivers durability at an approachable spec level — a strong choice for multi-hole backyard courses and practice green retrofits.

Face weight, total weight, and pile height specs are available from your CTC rep.

Spec	Detail
Face Weight	58 oz
Total Weight	85 oz
Pile Height	.63 inches (low-profile pro surface)
Fiber Type	Textured Poly for grain-neutral ball roll
Infill (Fine Silica Sand)	High Ballast Rate (2.5-3 lbs; 30/50 mesh)
Warranty	15-year material
